## Personal Statement

### Who am I?

I am very hard working and reliable. I have a great attitude towards work and believe with the right mindset anything can be done. I am motivated and always up for a challenge, I am also willing to learn new skills if the opportunity arises. I am a motivated person and work well in a team or on my own. I am very passionate about computers and have a strong background in them. I put 110% in to anything I do.

### What I can offer?

I am currently training to gain the qualifications necessary to be a **full stack web developer**. I am training with the [Code Institute](#) through [The Learning People](#). I have experience in IT working with software but also with programming, including languages such as **HTML/5, CSS/3, Bootstrap, C++** and as I continue my training I will learn languages such as **JavaScript, JQuery, Python, and SQL**. You can view more about the course [HERE](#). I am also currently working as an assistant manager for the betting company Betfred.

### My Aim?

After a few years out of work to be a full time parent I am seeking a full time/permanent role. I wish to be part of a successful team and have a drive to succeed and climb the ladder to success. I have a very strong passion for programming computers.

## Work Experience/History

My personal Website: <http://gunnerjnr.uk>. I am currently rebuilding my personal website from scratch in HTML5, CSS3 and Bootstrap, which will perhaps have some JS somewhere along the line. Once I have more time I will be able to add a few demos of games I have created in the past using Unity3D, and some C++ and Direct3D9, these were mainly projects for the listed course below with Train2Game.

The Foreman Ambler Group Website: <http://foremanamblergroup.com>. Created a basic site for the foreman ambler group. This project involved HTML5, CSS3 and Bootstrap.

Bop the Bad Elf: Bop the bad elf is a small game I created on the Android mobile platform. It can be downloaded from the Google Play store [HERE](#). It is a simplistic whack-a-mole style game. It was created using the [AGK2 Framework](#) which was created by 'The Game Creators'. On this occasion the game was created using the BASIC programming language. They also have Tier 2 which supports C++ programming. I am currently working on a few things with this.

Also here is a video interview from the Game Jam I attended with train2game. [David Gunner - T2G Game Jam Interview](#). We had 48 hours to create a game, we managed to make a playable level, but hit a few bugs along the way and so although the level was playable it was incomplete. Great experience though, I would certainly do it again. I should also state due to some unforeseen circumstances I am no longer a student with Train2Game and so did not make it to the end of the course to get my Level 7 Degree equivalent.

## Past & Present Learning

### **2010**

Learn Direct Course in CLAIT with Math's & English.

In my past experience I have completed the CLAIT course with Learn Direct and received certificates with the foundation Math's & English examinations that must be completed with the course.

## Hobbies and Interests

I am a family man and I love spending time with my daughters. I like to go for walks and spend time with my family in general. When I am away from the family I like to sit on my computer programming as I can't get enough of it. I also enjoy movies, playing video games and reading up about new things technology wise.
